

Coin or token operated lock

Reference: **SP-10**

Description

Automatic coin-operated toilet lock for tokens and/or coins (€0.10, €0.20, €0.50, €1, or €2), suitable for train stations, bars, brasseries, hotels, campsites, beaches, petrol stations, swimming pools...

Provides controlled access while helping to cover the costs of maintaining toilets, showers, and other facilities.

After the required coin is inserted, the handle can be pushed down to open the door.

The user naturally closes and locks the door from the inside without needing specific instructions.

A mechanism prevents the door from being locked again in an attempt to gain free access.

The indicators AVAILABLE (green) and OCCUPIED (red) are easy to distinguish.

When in the OCCUPIED position, the lock blocks coin insertion and prevents the door from being opened.

In special cases, a maintenance key allows the door to be opened or locked from the outside.

Features

Housing in white composite material, handle and inner plate in satin nickel metal.

Capacity: 400 (€0.50) to 600 pieces (€0.10).

Simple installation without power supply.
